

Lone Star Blower

Starlube® Oil Sample Kit

Oil Analysis Promotes Equipment Efficiency And Longevity

Lone Star's Oil Sample Kit contains all you need to protect your investment. Oil should only be changed when needed and every site and operation is different.

To avoid costly and un-necessary oil changes an oil sample analysis can determine your real maintenance interval v.s. an arbitrary hourly run as stated in the equipment generic operations manual.

Convenience!

Kit contains a manual oil pump, disposable tubing and filling bottles.

After a bottle is filled, there is a shipping container and a pre-paid postage as well as a self-addressed shipping bag.

Also included with the cost of the kit is the pre-paid oil analysis which will be sent to you in a detailed report in 1-2 weeks from receipt. This is also shared with Lone Star for consultation.

*Each kit **LSB-OSK-XX** can be ordered with 1 to 10 samples.*

Through regular oil analysis, you can determine if the lubricant in a system is still effective, and when it is time for a fluid change-out. You can avoid the risk of waiting too long, thereby avoiding costly equipment damage or failure. In addition, better lubrication can improve energy efficiency!

Starlube® Synthetic Lubricants are specifically designed to ensure maximum reliability and superior performance for geared and multistage turbo technologies. **Consult Lone Star to upgrade to a full synthetic to reduce maintenance intervals and better protect your equipment.**
